

Folders included:

1. **Pure python implementation:** Uses only python. Dictionaries for tables in the original method
2. **Python with SQL:** Python was only used for parsing. All other operations were done using sqlite3

The SQL implementation is way faster and more memory efficient than pure python implementation for creation of the resource.

The thesaurus.db file was not included because of its size. It was 231MB on disk.

Each folder has its own readme files.
